Tredence Analytics

Job Description: Cloud Engineering Intern

Location: Bengaluru, India
Duration: 1 year (extendable / convertible), PPO will be given based on performance.
Stipend : 30k per month/-

About Tredence Studio

At Tredence Studio, we are not just following trends; we are building the future of AI. We are developing State-of-the-Art (SOTA) capabilities in **AI Agentic Engineering** to build a paradigm-shifting platform from the ground up. We are looking for an elite **Cloud Engineering Intern** who is ready to move beyond coursework and solve complex, real-world problems. This is a zero-to-one role, and you will be a core contributor to a product built to challenge industry leaders.

The Opportunity

This is not a typical internship. You will not be on the sidelines. You will be in the trenches with a team of expert engineers, tackling difficult architectural and product challenges. You will gain deep, hands-on mastery of the entire development lifecycle. We are looking for highly motivated and passionate **Cloud Engineer Interns** to join our Cloud Engineering team. This internship offers an opportunity to work on real-world cloud infrastructure, automation, cloud-native applications, and enterprise-scale deployments across **Microsoft Azure, Amazon Web Services (AWS), and Google Cloud Platform (GCP).**

Core Responsibilities

- Assist in managing cloud infrastructure across **Azure, AWS, and GCP**.
- Monitor, troubleshoot, and optimize cloud resources for performance and reliability.
- Automate cloud operations using **Python**, APIs, and cloud SDKs.
- Support **IAM, RBAC, cloud security**, backup, and disaster recovery processes.
- Work with **SQL/NoSQL databases**, storage services, and data migrations.
- Assist in **CI/CD pipelines**, container deployments, and DevOps practices.
- Monitor infrastructure using cloud-native tools and create dashboards/alerts.
- Collaborate with engineering and security teams in Agile environments.

Tredence Analytics

Required Skills & Qualifications

- Hands-on experience with **Azure, AWS, or GCP**
- Strong **Python** programming
- Knowledge of **Linux, Networking (TCP/IP, DNS, HTTP/HTTPS), REST APIs**
- Understanding of **Cloud Architecture, Databases, Virtualization, and Cloud Security**

Preferred Skills

- Docker, Kubernetes, Terraform
- Git/GitHub, CI/CD tools
- Bash scripting, Infrastructure as Code (IaC)
- CloudWatch, Azure Monitor, GCP Monitoring
- IAM, Serverless Computing, Microservices Architecture

If you're passionate about cloud technologies, infrastructure automation, and building scalable solutions that power modern applications, we'd love to hear from you. Join us and kickstart your career in Tredence!
