MathCo

Challengers Hiring Program

Where Great Minds Solve **High-Impact Problems**

Designation: AI - Analyst

Office Location: MathCo, 8th Floor, Tower A, IWF Campus, Whitefield Main Rd, B Narayanapura, Mahadevapura, Bengaluru, Karnataka, India - 560048.

Why MathCo?

MathCo® is a global Enterprise AI and Analytics company trusted by Fortune 500 and Global 2000 leaders to make high-stakes, data-driven decisions. Founded in 2016, we build custom AI and advanced analytics solutions through an innovative hybrid model — combining deep domain expertise with cutting-edge technology.

At MathCo, we value capability and attitude over pedigree, and foster an open, barrier-free culture where every Mathemagician is empowered to Leave a Mark.

What You'll Build – After the Challengers Program

Once you complete MathCo's onboarding program, you'll work on real, production-grade AI systems for global enterprises:

- AI-powered enterprise applications.
- Decision intelligence platforms
- End-to-end AI workflows and automation solutions
- Custom decision and AI systems at scale
- Agentic workflows and multi-step AI orchestration
- Client-facing AI solution prototypes and demo

Responsibilities:

Business Problem Solving

- Consult and liaise with clients and stakeholders to deeply understand business problems and translate them into AI-solvable problem statements
- Define, decompose, and frame complex cross-domain challenges while leveraging subject-matter experts.
- Communicate findings, model outputs, and recommendations clearly to both technical and non-technical audiences.

AI-Native Execution

- Build and deploy AI/ML models — spanning Machine Learning, Deep Learning, Neural Networks, NLP, Computer Vision, and Generative AI — to solve enterprise-grade problems.
- Design and implement AI workflows, agentic pipelines, and multi-step AI orchestration logic.
- Continuously learn and gain proficiency in tools like Python, Spark, TensorFlow, LangChain, and emerging AI frameworks

Building Enterprise-Level Applications

- Develop scalable, production-ready AI systems and decision intelligence platforms used by global Fortune 500 clients.
- Contribute to the design and deployment of custom AI automation solutions tailored to specific business contexts.
- Collaborate with cross-functional teams — data engineers, product managers, and domain consultants — to ship complete, integrated solutions

Data & Engineering

- Build and maintain robust data pipelines, ensuring data quality, availability, and integrity for AI/ML workloads.
- Apply strong analytical thinking and engineering rigour to data wrangling, feature engineering, and model evaluation.
- Gain expertise in AI/ML Design & Engineering — from data ingestion through model serving.

Product Development & Consumption Enablement

- Own end-to-end delivery of analytical solutions within a project — from problem framing to final deployment.
- Increase last-mile adoption by building user-facing AI prototypes, demos, and interfaces that make insights actionable
- Work closely with stakeholders to iterate on solutions based on real-world feedback and ensure continued business impact.

Cultural Alignment

- Stay curious — ask the question others don't.
- Continuously upskill and get certified in new technologies, tools, and algorithms.
- Take ownership and drive results with an excellence-first mindset.
- Understand and embody MathCo's collaborative, open way of working.
- Actively contribute to initiatives that fuel company-wide growth.

Preferred Educational Qualifications:

Graduating class of 2027 — B.E / B.Tech (any engineering stream)

Hiring Process

- Aptitude Test – Online
- Communication Test – Online
- Technical Interview – In-person
- Case Study – In-person
- Final Interview – In-person
